

Census Results:

Conducted two population-wide censuses of nests: one in the incubation period (mid-July) and one after the hatching period (mid-September).

Census Month	Number Adults	Number Eggs	Number Chicks	Active Nests	Abandoned Eggs	Lost Eggs	Dead Chicks	Lost Nests
July	245	23	0	268	8	10	0	18
Sept.	8	0	84	92	1	20	1	22

<p>July Incubation Rate: 91.4% (241 of 244 adults incubating, 1 unknown)</p>	<p>Sept. Incubation Rate: 0% (0 of 8 adults incubating)</p>
<p>Adults refers to the number of nests where one or two adult birds present, but an egg not readily visible. Lost Eggs refers to predated or broken eggs in a nest. Abandoned Eggs were found outside of a nest. Active Nests includes nests occupied by one or two adults (whether incubating or not), an egg or a chick. Lost Nests includes abandoned, predated and broken eggs that will not hatch, and dead chicks.</p>	

Nest Monitoring Results:

Monitored 60 nests and recorded the hatching dates and the growth of 30 chicks from mid July to mid Nov.

Hatching dates:

Aug. 3 - 15.

Mean = Aug 7 (n = 30)
