

Census Results:

Conducted two population-wide censuses of nests: one in the incubation period (mid-July) and one after the hatching period (mid-September).

Census Month	Number Adults	Number Eggs	Number Chicks	Active Nests	Abandoned Eggs	Lost Eggs	Dead Chicks	Lost Nests
July	290	19	0	309	0	4	0	4
Sept.	6	0	204	76	8	28	1	37

July Incubation Rate:

98% (281 of 286 adults incubating)

Sept. Incubation Rate:

0% (0 of 0 adult incubating)

Adults refers to the number of nests where one or two adult birds present, but an egg not readily visible.

Lost Eggs refers to predated or broken eggs in a nest. **Abandoned Eggs** were found outside of a nest.

Active Nests includes nests occupied by one or two adults (whether incubating or not), an egg or a chick.

Lost Nests includes abandoned, predated and broken eggs that will not hatch, and dead chicks.

Census Results:

Monitored the growth of 39 chicks from mid July to mid November.

Hatching dates:

Aug. 1 - Sept. 1

Mean = Aug 11 (n = 44)

(August 17 - November 7, 2018)
