

Population Census Results:

Conducted two population-wide censuses of nests: one in the incubation period (mid-July) and one after the hatching period (mid-September).

Census Month	Number Adults	Number Eggs	Number Chicks	Active Nests	Abandoned Eggs	Lost Eggs	Dead Chicks	Lost Nests
July	176	6	0	182	6	0	0	6
Sept.	5	21	137	163	0	0	1	1

July Incubation Rate:

98% (158 of 162 adults incubating)

Sept. Incubation Rate:

20% (1 of 5 adults incubating)

Adults refers to the number of nests where one or two adult birds present, but an egg not readily visible.

Lost Eggs refers to predated or broken eggs in a nest. **Abandoned Eggs** were found outside of a nest.

Active Nests includes nests occupied by one or two adults (whether incubating or not), an egg or a chick.

Lost Nests includes abandoned, predated and broken eggs that will not hatch, and dead chicks.

Nest Monitoring Results:

Monitored 34 nests and recorded the hatching dates and the growth of 31 chicks from mid July to mid Nov.

Hatching dates:

July 31 - Aug. 28.

Mean = Aug 8 (n = 31)
